Manager Commentary

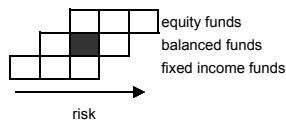

With the exception of Japan all major equity markets where the fund invests in posted a positive return in September. Fund benefited the most by being invested in the Russian equity market, which was up by over 10% in a month. The biggest negative contribution came from the downward valuation on Baltic corporate bonds, which were devalued to the price we consider them being possible to offload. This subtracted approximately 1% from the September performance, but despite of this fund still managed to post a non negative return.

Fund entered the Q4 with close to maximum (50%) allowed equity allocation. We see that global business cycle and market technical indicators are still supportive for equities. In addition, there are signs that Q3 earnings season has a potential to surprise on the upside.

In fixed income we added positions to double digit yielding Lithuanian EEK denominated bonds. We also continue working hard on Baltic corporate bonds with the aim of realising their execution value at the higher level. In the Euro market the fund made good profits from exploiting misruled yield curves within the EMU area. For instance the 10 year Greece bond was very cheap compared to the 7 year and the 15 year bond. The fund was also overweight in peripheral EMU that rallied at the end of the month.

The value of the Fund's unit can either grow or decrease in time. The current return of the Fund shall not guarantee the same return in the future. Funds investing in foreign markets are vulnerable to monetary movements, which may lead to a growth or decrease of the net asset value of the Fund's unit. Pension Funds are founded on the basis of Funded Pensions Act. The following payment which conditionally consists of two parts - tax (4% portion of the social tax) and contribution (2% contribution of the state funded pension, withheld by the employer on the employee's gross wages) - shall be transferred to the mandatory funded pension account for a person who has joined the funded pension system.
