Portfolio by regions

Swedbank Pension Fund K3 return in November was 0.7% with year-to-date performance of 8.2%. November was particularly eventful. The U.S. programme for further monetary easing measures (QE2) was published and this had a supporting impact on the US equity markets together with the globally improving economic growth data coming mainly from the U.S. The aftermath of the strong Q3 corporate profit levels certainly played its part here. Unfortunately the same cannot be said about the European equity markets, including those of Central and Eastern Europe. Negative sentiments were cast by speculations about the sustainability of budget position in several periphery euro zone countries. Euro weakened. Due to investors' increased risk sensitivity, short term (two-year) bonds, which interests in the core countries fell, became much more sought-after in the eurozone interest markets while in case of even a little longer term government bonds the biggest interest rise of the recent years was observed due to outflow of money.

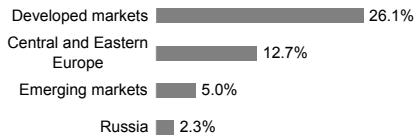

Due to euro weakness, the largest growth in the fund's portfolio was shown by investments in the geographically farther equity markets, Japan and the U.S. The European equity and fixed income markets remained in the negative territory. At the same time the loss on the severely falling fixed income market was limited by the relative low interest risk level of the portfolio.

During the month we reduced our positions in the equity market of emerging countries, primarily Asia and Latin America. As a warning signal, we have seen massive investments to these markets and the first signs of increasing inflation pressure during the last year. On the fixed income market we continue to favour short term and investment grade bonds.
